Course Name: Management Central

Course Code: ISMTC

Duration: 1 Day

Price: £ 350

Course Outline: This course is aimed at support staff and operators who want to easily manage one or more servers from a single PC. Management Central enables the automation of functions such as system resource/message/job/file monitoring etc. and it has tools to simply distribute PTFs/data/user profiles etc. throughout a network.

Prerequisites: Delegates will have attended the Operations course (ISOPS) or have the equivalent hands on experience.

Course Content:
- Introduction to Management Central Concepts and terminology
- Set up the central server, endpoint systems and system groups
- The Management Central server
- Secure Management Central functions using Application Administration
- Start, end, copy, delete and schedule tasks
- Run commands on one or more servers simultaneously
- Send, install and manage PTFs across a network of servers easily
- Keep PTFs consistent across a network of servers
- Distribute objects, libraries, directories throughout a network
- Create/manage user and group profiles across a network of servers
- Automate the monitoring of CPU, disk storage etc. across servers
- Produce real time resource utilisation reports
- Use Graph History to display/generate resource utilisation reports
- Use Collection Services to collect performance data
- Monitor jobs (e.g. job status, job log message, jobs resource utilisation etc.)
- Monitor messages and give default replies
- Monitor DB files and the History Log

- Keep system values consistent across a network of servers
- Distribute in house written applications throughout a network
- Distribute licensed programs throughout a network
- Collect/manage the inventory of HW, SW resources
- Collect/manage the inventory of user and group profiles, system values

Follow on Courses: There are no specific follow on course to this course.
